

EAS Batteries GmbH is an established and specialized German manufacturer of large-format cylindrical lithium-ion cells (electrochemical energy storage) and battery systems which are particularly used in the aerospace, aviation, shipping and automotive sectors. Due to the flexibility of its production line, EAS can adapt its products to special customer requirements and is the ideal partner for customised battery modules for extraordinary requirements. The company is based in Nordhausen/Thuringia.

To strengthen our team, we are looking for a project manager (m/f/d)¹⁾ in the field of lithium-ion cell development and cell production in Nordhausen /Thuringia with immediate effect

Responsibilities and tasks

- management of several projects in the field of lithium-ion technology
- preparation of the project management including the preparation of cost and time schedules
- conception of customer-specific special requirements in the field of lithium-ion batteries
- presentation of technology to strategic partners and customers as well as conducting bid negotiations
- creation and updating of the necessary project documentation
- responsibility for the project budget and constant review of the project progress
- conception of customer-specific requirements for lithium-ion cells
- development and improvement of existing technologies and equipment with the project team
- close technical coordination with R&D and production
- acquisition and coordination of public funded projects

Your profile

- professional experience in management of industrial projects
- completed scientific or technical degree (e.g., chemistry, physics, engineering)
- special knowledge of lithium-ion cells advantageous
- good technological comprehension, strong communication skills, ability to deal with conflict, openness and interest in making a difference with the team
- good technological understanding
- flexible thinking and enthusiasm
- German and English spoken and written
- willingness to travel occasionally on national/international business trips

Would you like to support us as a full-time project manager in the field of lithium-ion cell development and cell production? Then we welcome your informative application documents by post or e-mail to:
